Why Study Excel?

- Excel is the world's most used spreadsheet program.
- Example use areas:
 1. Data analytics
 2. Project management
 3. Finance and accounting

Multiple Sheets

Creating formulas

- Select a cell
- Type the equal sign (=)
- Select a cell or type value
- Enter an arithmetic operator
- Select another cell or type value
- Press enter

To add text to a shape

- For example $=1+1$ is the formula to calculate $1+1=2$
- reference(value) for example $A1(2)$

Using Formulas with Cells

- we can use them to create formulas
 1. Select the cell C1
 2. Type the equal sign (=)
 3. Left click on A1, the cell that has the (309) value
 4. Type the minus sign (-)
 5. Left click on B2, the cell that has the (35) value

IF Function

- **=IF(logical_test, [value_if_true], [value_if_false])**
- **The condition is referred to as logical_test, which can check things like:**
 - **If a number is greater than another number >**
 - **If a number is smaller than another number <**
 - **If a number or text is equal to something =**

IF Function Example

- The condition is if the "Type 1" value is "Grass".
- The function returns "Yes" or "No".

AVERAGE Function

- The average of (2, 3, 4) is 3.

3 observations (2, 3 and 4)

The sum of the observations ($2 + 3 + 4 = 9$)

$(9 / 3 = 3)$

The average is 3
